December 2005

## 2005 Electronic Filing Season Results A Review of State and Federal Data

## Table 1: Federal and State Electronic Individual Income Tax Returns

Table 1 displays raw data on number of individual electronic returns filed by type of filing: (a) ELF returns - practitioner prepared and filed returns; (b) Telefile returns - returns filed through touch-tone telephone; (c) Online returns - self-prepared returns prepared and filed using commercial software or Web applications; and (e) I-file returns - returns filed with states directly via state-maintained Web sites. Percentages on the right side of table are state electronic returns as a percent of federal electronic returns of the same type.

The analysis is based on data received from IRS and the states. All income tax states except Virginia are included in the analysis. "Online returns" for Massachusetts are estimated, and state data was used to distribute "State Only" returns.

Chart 1: Total State Electronic Returns as Proportion of Total Federal Electronic Returns

- Overall, state electronic returns equaled 93.4 percent of the total federal electronic returns. Individual state percentages ranged from over 103 percent in Kansas to 86.6 percent in Hawaii. The U.S. average is up from 86 percent in 2003 and 90 percent in 2004.
- Five states received more electronic state returns than the federal government received from that state. Two states - Massachusetts and Ohio - have Telefile systems that are used extensively, and four states - all except Massachusetts - have a Direct I-file program.
- Thirteen states had a ratio of 95 percent or greater, and twenty-six had a ratio in excess of 90 percent.

## Chart 2: Total State Electronic Returns as Proportion of Total Federal Electronic Returns (Excluding Telefile at Both Levels)

- The U.S. average proportion is 94.3 percent up from 91 percent in 2004. State percentages range form over 105 percent in Delaware to just under 70 percent in Hawaii.
- Three states - Delaware, New Mexico and Kansas - had a ratio in excess of 100 percent. Seventeen states had a ratio of 95 percent or more, and twenty-eight states had a ratio in excess of 90 percent.

## Chart 3:State Practitioner-filed Electronic Returns as Proportion of Federal Practitionerfiled Returns

- The U.S. average ratio is 97.3 percent, up from 94 percent in 2003 and 2004. State percentages range from over 106 percent in Kansas to 73 percent in Hawaii.
- Eleven states received more practitioner-filed returns than did the federal government from that state (presumably due to "state only" returns.) Only three states had a ratio of less than 90 percent.

## Chart 4: State Online Returns as Proportion of Federal Online Returns

- The U.S. average ratio is 69.4 percent, appreciably lower than for practitioner-filed or total returns. In 2004, the ratio was 67 percent. The rapid growth in Free File returns (shown in this category) may partially account for the lower ratio since not all states receive Free File returns, and state filing thresholds for Free File were more stringent than at the federal level.
- The ratio ranges from a high of 93 percent in Minnesota to less than 50 percent in Louisiana, Pennsylvania and Illinois.
- These ratios reflect the influence of the Free File Alliance. Of the thirteen states with the lowest ratios, 11 offer a Direct I-file option, meaning the Free File Alliance does not offer services in the state.

## Chart 5: State Online and Direct I-file Returns as Proportion of Federal Online Returns

- Adding I-file returns increases the ratio of state to federal self-prepared returns to just under 85 percent, and the range runs from 123 percent in New Mexico to 53.6 percent in West Virginia.
- Four states - New Mexico, Delaware, Maine and Maryland - receive more self-prepared electronic returns than does the federal government. Of the seventeen states with the highest ratio, all but Minnesota administer a Direct I-file option, implying that the I-file programs more than compensate for the absence of a Free File program.
- There is some regional variation here in that of the seventeen states with the lowest ratio, seven are in the Southeast part of the country.

## Chart 6: Online and I-file Returns as Proportion of Total Electronic Returns (Excluding Telefile)

- Self-prepared electronic returns are a substantial proportion of electronic returns in a number of states. They comprise more than 30 percent of all electronic returns in eight states, and they amount to more than one fifth of all electronic returns in 25 states.

## Chart 7: Proportion of All State Returns Received Electronically

- In the 2005 filing season, states received 48 percent of all returns electronically. This is up from 42 percent in 2004 and 31 percent in 2003.
- Eleven states received more than one half of their returns electronically, and two - Iowa and Minnesota - received more than 60 percent electronically. Four out of the top five states have an electronic filing mandate in place

## Conclusion

- State electronic filing continues to increase at a faster rate than federal electronic filing.
- States have, to a considerable degree, exhausted their ability to grow the e-file market by simply capturing taxpayers that were filing an electronic federal return, but not an electronic state return. There is still room in a number of states to pick up additional returns by picking up federal online return filers.
- I-file programs appear to offset the lack of Free File offerings and to generate "additional" electronic returns, i.e., returns beyond that that would be expected from looking at federal returns.
